

Construction Induction Training- White Card

CPCWHS1001 Prepare to work safely in the construction industry unit of competency specifies the mandatory work health and safety training required prior to undertaking construction work.

The unit requires the person to demonstrate personal awareness and knowledge of health and safety legislative requirements to work safely and prevent injury or harm to self and others. It covers identifying and orally reporting common construction hazards, understanding basic risk control measures, and identifying procedures for responding to potential incidents and emergencies. It also covers correctly selecting and fitting common personal protective equipment (PPE) used for construction work.

This unit meets the general construction induction training requirements of part 1.1 Definitions and Part 6.5 of the Model Work Health and Safety Regulations.

It is expected that site-specific induction training will be conducted prior to conducting construction work.

Licensing, legislative, regulatory or certification requirements apply to this unit. Relevant work health and safety state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

COURSE DURATION

St John offers the following options:

- 1 day face to face workshop: This is full face to face course and participants are required to attend the full session.
- Assessment only: This course is for those who are confident in their skills and only want to complete the assessment.
